

## **TREADSURE™ Footwear Traction Enhancement**

You can easily apply TREADSURE™ to soles of footwear to increase traction, decrease slip and the risk of slip and fall accidents, particularly on wet surfaces. No special equipment or tools are required and treated footwear can be used immediately after treatment, even when wet.

### **How Does It Work?**

The TREADSURE™ treatment provides an invisible nanotechnology coating that has millions of small peaks. These peaks increase the traction of the surface of soles of footwear and reduce slip. The original surface is not changed in any way with no etching and no colour change.

### **Treatment of Footwear**

NOTE: Although we have not seen any damage to surfaces we have treated we always recommend testing the TREADSURE™ product on a small inconspicuous area before a full treatment is applied.

### **Please read entire instructions before proceeding.**

1. Ensure the surface of footwear is clean and dry.
2. Place the footwear in a clean shallow tray with a flat bottom. A plastic paint tray is ideal but must be clean and free of other chemicals. Pour the TREADSURE™ solution into the tray so that the bottom of the soles of the footwear is completely wet. Ensure that the soles of the footwear are saturated and remain saturated with TREADSURE™ for **at least 12 hours**.

NOTE: If the footwear has a raised toe, prop the heel of the footwear so the toe is in the TREADSURE™ solution and leave for **another 4 hours**.

3. Remove the footwear after the required time and rinse the soles with clean water for at least two seconds to deactivate the bonding process.
4. Dispose of the TREADSURE™ solution remaining in the tray. TREADSURE™ is environmentally safe and can be disposed of into drains.

You have now given your footwear the TREADSURE™ treatment.

### **Re-Application**

Longevity of treatment depends on the use and the environment that the footwear is exposed to. Most footwear will have increased traction for at least three months and up to six months. Reapply TREADSURE™ when you notice a decrease in traction and an increase in slip.

### **Safety Precautions**

**For external use only.** Keep out of reach of children and pets. Avoid contact with eyes. Flush eyes with water and seek medical advice if irritation occurs. If swallowed wash mouth with water and seek medical attention if irritation occurs. **Skin Contact:** Wash skin with soap and water.
